

Measuring the Internet (User) Growth in Thailand

Chalernpol Charnsripinyo

National Electronics and Computer Technology Center (NECTEC),
Thailand

AINTEC2008, 18 November 2008, Pullman Bangkok King Power, Bangkok, Thailand

Outline

- ◆ Introduction
- ◆ The Development of Internet in Thailand
- ◆ Internet Services in Thailand
- ◆ Measuring The Internet Growth
- ◆ Conclusions

About Thailand

- ◆ Population: 65.4 Million
 - ◆ Bangkok 6.87 M (10.5%)
 - ◆ Central 15.86 M (24.3%)
[not included Bangkok]
 - ◆ North 11.71 M (17.9%)
 - ◆ North East 22.02 M (33.7%)
 - ◆ South 8.89 M (13.6%)

Introduction

- ◆ The Internet has been growing rapidly. Measuring the Internet growth is a subject of interest.
- ◆ The International Telecommunication Union (ITU) has defined a number of Internet indicators such as Internet users, International Bandwidth, etc.
- ◆ Internet indicators are essential for quantifying the state of the Internet.
 - They are often used to compare and infer the digital divide, ICT development, and competitiveness for each economy.
 - Some Internet indicators can be used for network planning and making business decision.
 - However, data and statistics are not easily accessible.
- ◆ Indicators and approaches for measuring Internet growth in Thailand with collected data and statistics are presented here in different aspects.

The Development of Internet in Thailand

- ◆ Before the Internet Liberalization, all Internet Service Providers (ISPs) must be a joint venture with CAT.
 - Every ISP bought international leased circuits to the Internet through CAT.
 - CAT also set up guideline pricing for ISPs
 - There were totally 18 ISPs receiving CAT's operating licenses.
- ◆ Telecommunications services were liberalized after the Broadcasting and Telecommunication Services B.E. 2543 (2000) and the Telecommunications Business Act B.E. 2544 (2001) entered into force
 - This Act is now implemented by the National Telecommunications Commission (NTC) formally established on October 1, 2004.

The Development of Internet in Thailand

- ◆ As of May 2008, there are totally 167 Telecommunications business licenses issued by the National Telecommunication Commission.
 - there are 79 Type-One Licenses for Internet Service Providers, 11 Type-Two Licenses for operating International Internet Gateway (IIG) and National Internet Exchange (IX), and 18 Type-Three Licenses for Network Providers

Internet Connectivity Map

Total International Bandwidth
45752.496 Mbps (Into Thailand)
45752.496 Mbps (Out from Thailand)

Internet Services in Thailand

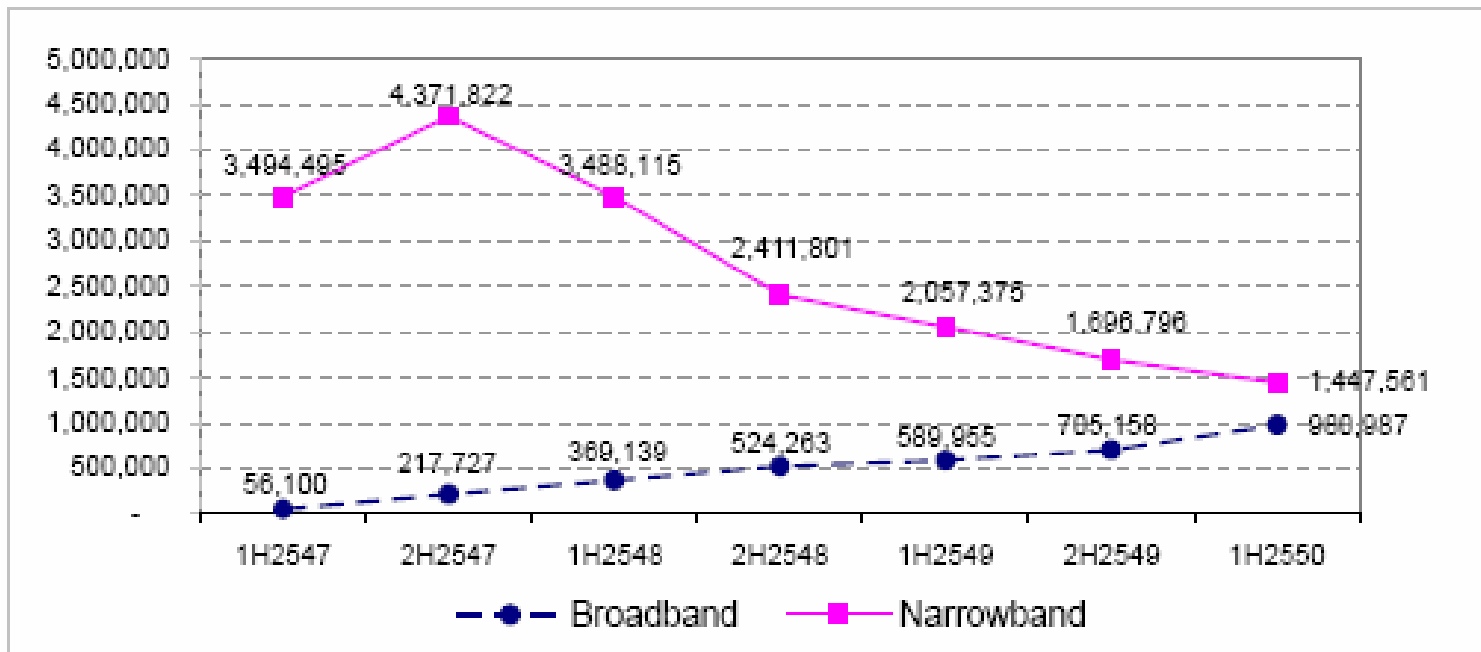

- ◆ Internet access services in Thailand are normally classified into
 - Corporate access services are typically provided to organizations or enterprise for business use
 - Home access services are provided to any individual for personal use.
- ◆ The Internet access technology is varied from low-speed dial-up to high-speed dedicated connection.
 - The service charges mostly depend on the access speed and usage time.

Market shares of Internet Services between Year 2005 -2007

Internet Services in Thailand

- ◆ Internet subscribers/users continue to migrate from narrowband to broadband Internet access.

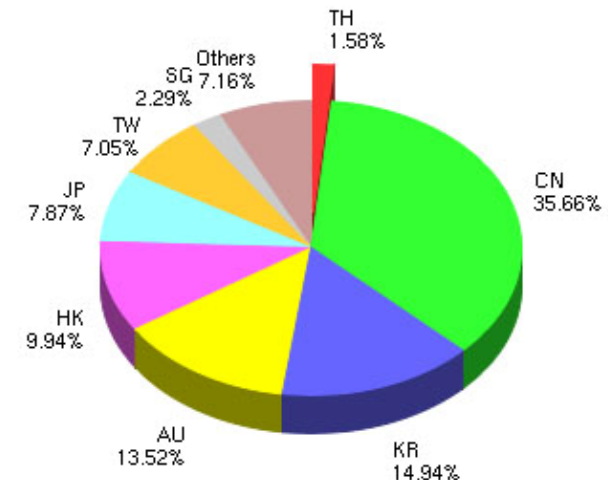

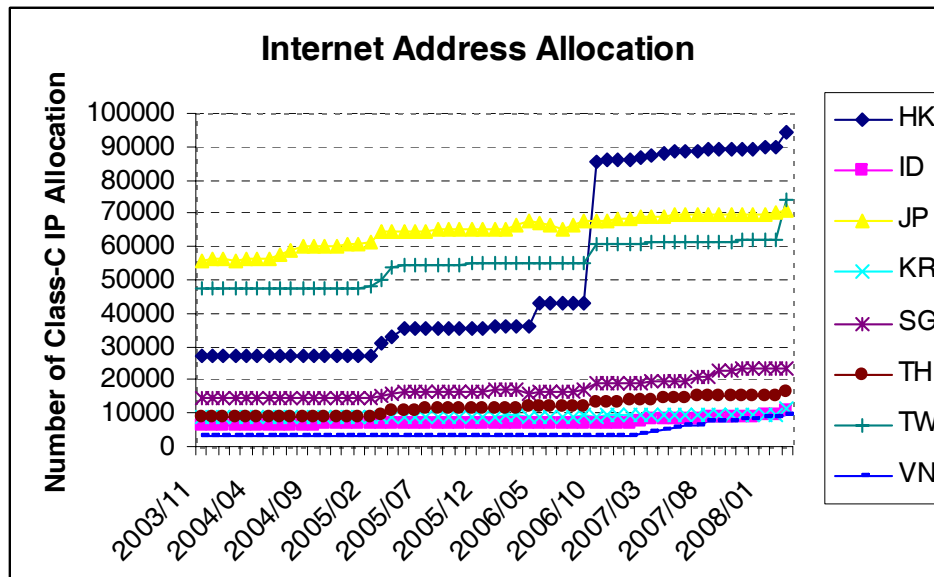

Number of Subscribers for Broadband and Narrowband Internet Services

Measuring The Internet Growth

◆ Internet Address

- The amount of IP address numbers allocated is observed to monitor the growth of the Internet

Amount of IPv4 address numbers allocated to TH : 15326 Class-C blocks
or **: 3,892,804 usable IP numbers**

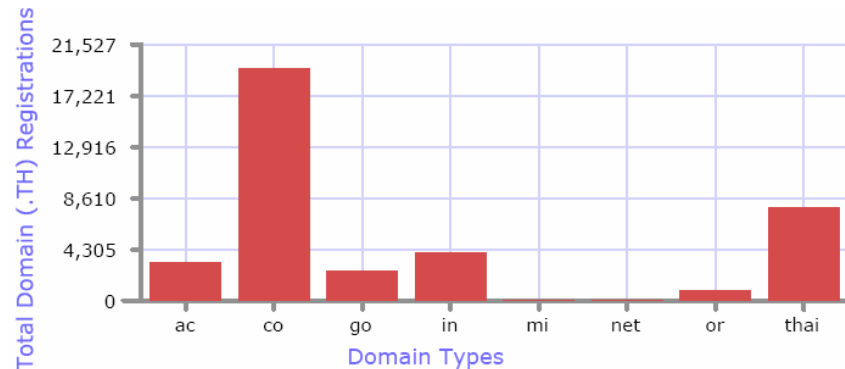

Source: <http://internet.nectec.or.th>

IP address allocations from APNIC

Measuring The Internet Growth

◆ Domain name under .TH

- The number of domain name registered under the Top-level domain name “.TH” is also observed as an indicator for the Internet growth.

Total registered domain name under .TH : 37,850

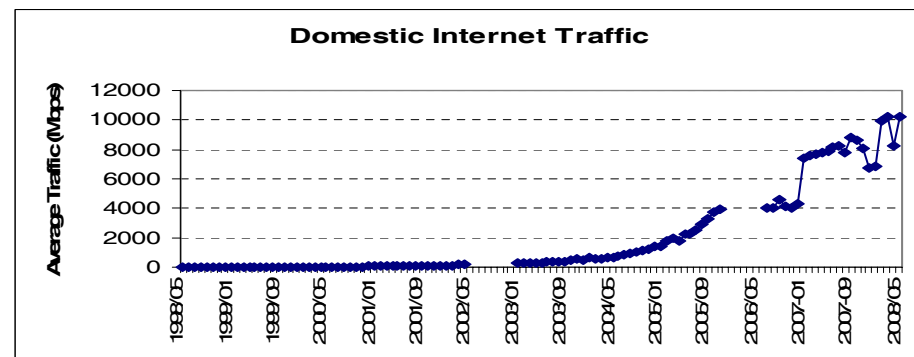

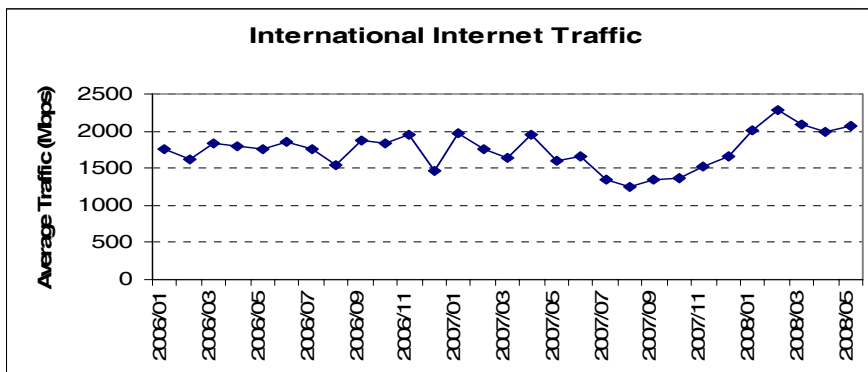

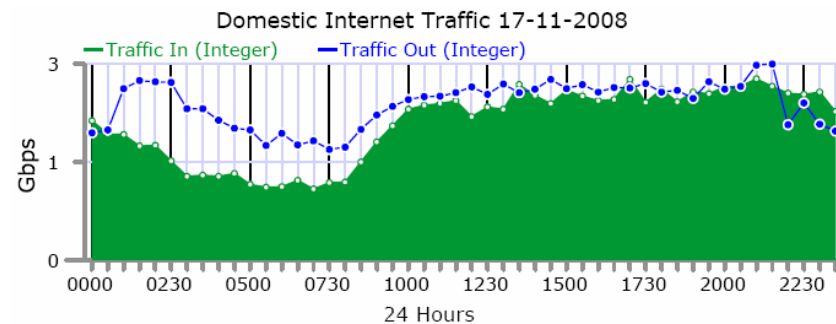

Source: THNIC statistics available at <http://internet.nectec.or.th>

Measuring The Internet Growth

◆ Internet Traffic

- The international Internet traffic refers to traffic going into and out of IIG and the domestic Internet traffic refers to traffic going to and leaving from NIX
- Internet traffic measurement has been a subject of interest. Internet traffic might be used to measure the Internet growth and usage.

Measuring The Internet Growth

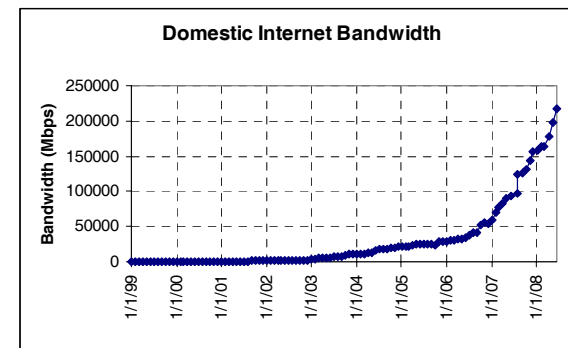

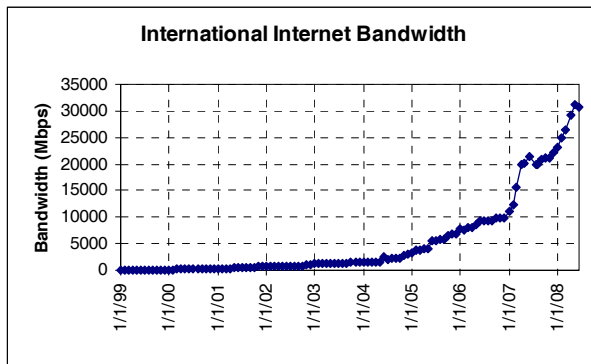

◆ Internet Bandwidth

- The ITU defines the International Internet Bandwidth as “Total capacity of international Internet bandwidth is in Mega Bits Per Second (Mbps). If the capacity is asymmetric (i.e., more incoming that outgoing), provide larger capacity.

Current International Bandwidth: 45 Gbps,

Domestic Bandwidth: 251 Gbps

Measuring The Internet Growth

◆ Internet User

- A number of countries are measuring this through regular surveys. In situations where surveys are not available, ITU recommends to use an estimate which can be derived based on the number of subscribers and the methodology used should be supplied.

Internet Use Survey

◆ Internet Use Survey (2006)

Total Number of surveys : 8.47 Million (14.2%)

◆ Bangkok 1.77 M (28%)

◆ Central 2.02 M (13.9%) ; not included Bangkok

◆ North 1.58 M (14.7%)

◆ North East 2.10 M (10.6%)

◆ South 0.97 M (12.3%)

◆ Source: ICT Household Survey 2006

[http://service.nso.go.th/nso/g_service/s_survey_49/report_ict49.pdf]

◆ Number of Samples: 79,560 Houses

◆ Surveyed between July and September 2006

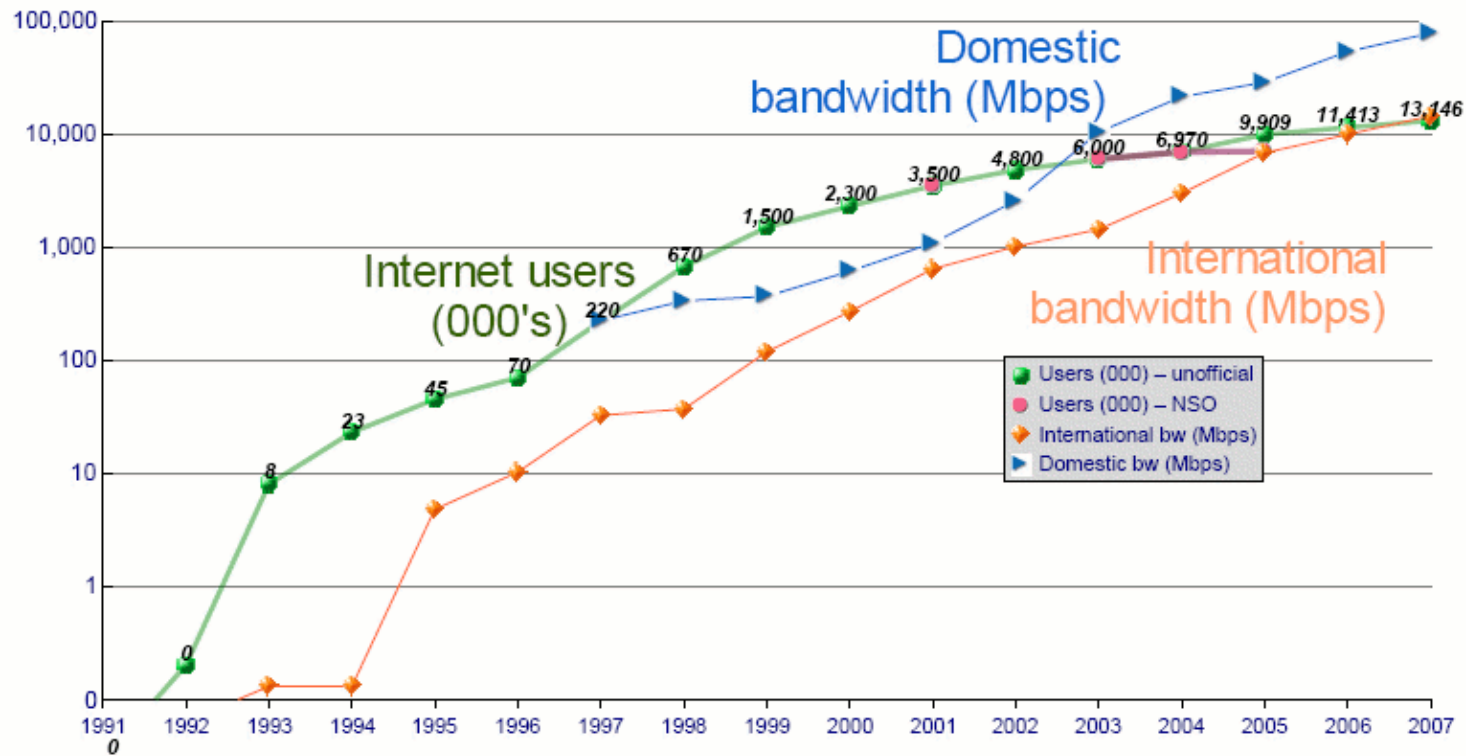

Computer Use & Internet Use Survey

ภาค	ประชากรทั้งสิ้น	ใช้คอมพิวเตอร์	ใช้อินเทอร์เน็ต
	Age > 6 yrs	จำนวน ('000)	
ทั่วราชอาณาจักร	59,508.6	15,392.5	8,465.8
กรุงเทพมหานคร	6,345.7	2,516.8	1,774.4
ภาคกลาง	14,587.2	3,827.0	2,028.6
ภาคเหนือ	10,789.7	2,804.8	1,581.4
ภาคตะวันออกเฉียงเหนือ	19,847.8	4,264.6	2,103.8
ภาคใต้	7,938.2	1,979.2	977.7
		อัตราร้อยละ	
ทั่วราชอาณาจักร	100.0	25.9	14.2
กรุงเทพมหานคร	100.0	39.7	28.0
ภาคกลาง	100.0	26.2	13.9
ภาคเหนือ	100.0	26.0	14.7
ภาคตะวันออกเฉียงเหนือ	100.0	21.5	10.6
ภาคใต้	100.0	24.9	12.3

Conclusions

- ◆ Data and statistics on Internet growth can be used to infer ICT development and competitiveness of each country
- ◆ Some indicators also could be used for network planning and making business decision.
- ◆ The current methods for measuring the number of Internet users are still varied.
 - ◆ Further work should be considered
- ◆ It is essential to measure the Internet growth in various aspects and make use of reports on different indicators
